TURSDAY, March 28.

The declining movement in security prices made further headway to-day, the market presenting an appearance of even greater general weakness than it did yesterday, owing to the fact that there was not in evidence, as there seemed to be yesterday, an effort to counteract the falling tendency by advancing certain quarters of the list, such as the minor industrial shares. To many observers the selling of stooks seemed to be due more than on any previous occasion to liquidation rather than to speculative operations for the fall, inasmuch as pressure to sell was general throughout the list, and while there were no "drives" at values, the recoveries made were feeble. Opening prices were almost than to speculative operations for the fall, inasmuch as pressure to sell was general throughout the list, and while there were no "drives" at values, the recoveries made were feeble. Opening prices were almost invariably lower than they were at the close yesterday afternoon, and in few cases during the day did quotations for stocks at any time touch yesterday's final figures. Some of the prominent issues to-day sold at lower prices than they did when the depression in the market last week was most pronounced. The best rally of the day was made in the last half hour, but it did not hold and prices fell again to a point but little above the lowest. Rather particular attention was attracted by the weakness of such stocks as Reading and Pennsylvania, which have hitherto strongly resisted the forces that have been making for a fall, nor indeed was there any one stock on the list to-day which could be singled out as being strong, although the price of Tennessee Coal and Iron stock at the close, if it did not show any gain, did not exhibit a loss. One source of liquidation that was very readily traced was that for the account of London. It is commonly estimated that in the last two days London has sold here 100,000 shares of stock. Reasons for this change of positions at the close, and the close of the close, of this change of positions at the close, and the close of the close of the close of this change of positions at the close, and the close of the clos of stock. Reasons for this change of position on the part of London speculators are unknown, and it is commonly believed that much of the so-called London selling has really been for the account of people in our own market, our speculators having found of late that it was cheaper to have stocks carried for them in London than here. The general London market itself was, however, heavy, a larger require-ment for money making itself felt there, along with some anxiety as to whether there had not been a miscalculation of the prospects for an easy European money market in the forthcoming months. 'These latter fears were such as would naturally be suggested by the notable fall of sterling in Paris, and they were hardly alleviated by the news of the internal disturbances in Russia and of the large fall in the price of Russian bonds in St. Petersburg. This last named event, on the other hand, did not seem to affect the Paris bourse to any appreciable extent, and is doubtless of significance only to the Russian home

market. Another consideration which played no small part in the course of to-day's events on the Stock Exchange was the renewed consideration given to the possibility that the Chicago, Milwaukee and St. Paul Railway Company will take up the idea in the near future of extending its lines to the Pacific Coast. This, it is true, is an old story, and its probabilities of truth were as great six months ago as they are now. The only real difference in the situation is that Wall Street is at present willing to think of these possibilities and that six months ago it was in a mood to put everything of the kind out of its mind. It may very well be that the St Paul has not yet committed itself to this project; the fact remains, however, that though no formal determination in the matter may have been made, the largest stockholding interests of the St. Paul company are contemplating with a definiteness with which they have never before regarded the subject the plan of pushing their railroad to the Pacific seaboard. Aside from the topics mentioned, there was nothing to-day that engaged Wall Street's attention sufficiently to be counted as a "market influence." Call money rose to 4 per cent., a circumstance that can hardly excit surprise considering the time of year. Sterling exchange was strong, as it necessarily would be after London's sales of stocks, and wheat and cotton were weak, the former because of continued good grop news and the latter by reason of what seemed to be speculative pressure directed against the staple options upon the publication of the Government's estimate, based upon the returns of cotton actually ginned, of a cotton crop for the year of over 13,500,000 bales. Opinion as to whether the due effect of this enormous cotton production has as yet been measured in the price of the commodity differ very considerably. Many intelligent and conservative experts believe that after the heavy fall in cotton that has already taken place and the stimulus thereby given to consumption of the article, no further drop in the price is to be expected, especially as the probabilities are that the cotton acreage in the coming season will be reduced. On the other hand, it is held that the willingness of the Southern planters to carry over into the next season so large a quantity of the current crop as they are now doing is not likely to be maintained, and that unless the crop now being planted meets with plainly unfavorable weather a great deal of the cotton held on the plantations will be offered for sale whenever cot-

ton prices evince a tendency to rise. New York Stock Exchange Sales Mar. 28. CLOSING PRICES OF UNITED STATES BONDS.

foreign houses were buying. Cotton Exchange houses were prominent in the buying. One house said: "Nothing new has developed. Receipts are running at the rate of about 430,000 bags for the mooth, which is a shade under bearish and a shade over builish estimates. The visible supply statement for the month of March is expected to show a very substantial decrease, perhaps as much as 475,000 bags, against about 280,000 bags for the same month last year, but it is also pointed out that we are now within a measurable distance of new crop supplies. From a speculative standpoint the market is still receiving the support of important trade interests, and it would seem to us that about all the bearish features of the situation at present visible had been discounted. Any favorable circumstance now would probably start covering, and, while we don't think a great deal of the market as a speculative medium at the present time, purchases on declines ought to give a fair profit."

METALS.—The market was duil, with the tone generally firm. In London tin advanced 7s. 6d. for spot, while futures declined 3s., closing at 267 17s. 6d. and 268 5s. respectively. Copper there advanced 8s. 9d. for spot and 2s. 8d. for futures, closing at 267 17s. 6d. and 268 5s. respectively.
